Development and Verification of the DDG-1000 Anti-Fratricide Munitions Container for 155mm LRLAP

7-10 October 2013

J. A. Luoma
jim.luoma@baesystems.com

Development and Verification of the DDG-1000 Anti-Fratricide Munitions Container for 155mm LRLAP

Abstract #16168

2013 Insensitive Munitions and Energetics
Materials Technology Symposium
Loews Coronado Bay, CA

© (2013) BAE Systems

“Distribution Statement A: Approved for Public Release; Distribution Unlimited (NAVSEA #487, Approval Date: 13-Sept-2013).”

DDG-1000 Zumwalt Class Destroyer

Characteristics

Length	600 ft	Displacement	14,564 LT
Beam	80.7 ft	Installed Power	78 MW
Draft	27.6 ft	Crew Size	142 (incl. Aviation detachment)
Speed	30 kt		

Sensors

- Dual Band Radar
- S-Band VSR
- X-Band MFR
- HF & MF Bow Sonar Arrays
- Multi-Function Towed Array
- EOMR System
- ES System

Superstructure
Composite structure

Weapons

- (80) Advanced vertical launch cells for Tomahawk, ESSM, Standard Missile
- (2) AGS 155 mm guns
- (600) 155 mm rounds
- (2) 57 mm Close In Guns
- Torpedo Defense (Space Reservation)
- Anti-Terrorism (Space Reservation)

Aviation
MH60R and (3) VTUAVs
(Capacity for 2 MH 60Rs)

Boats
(2) 7m RHIBs
(sized for (2) 11m RHIBs)

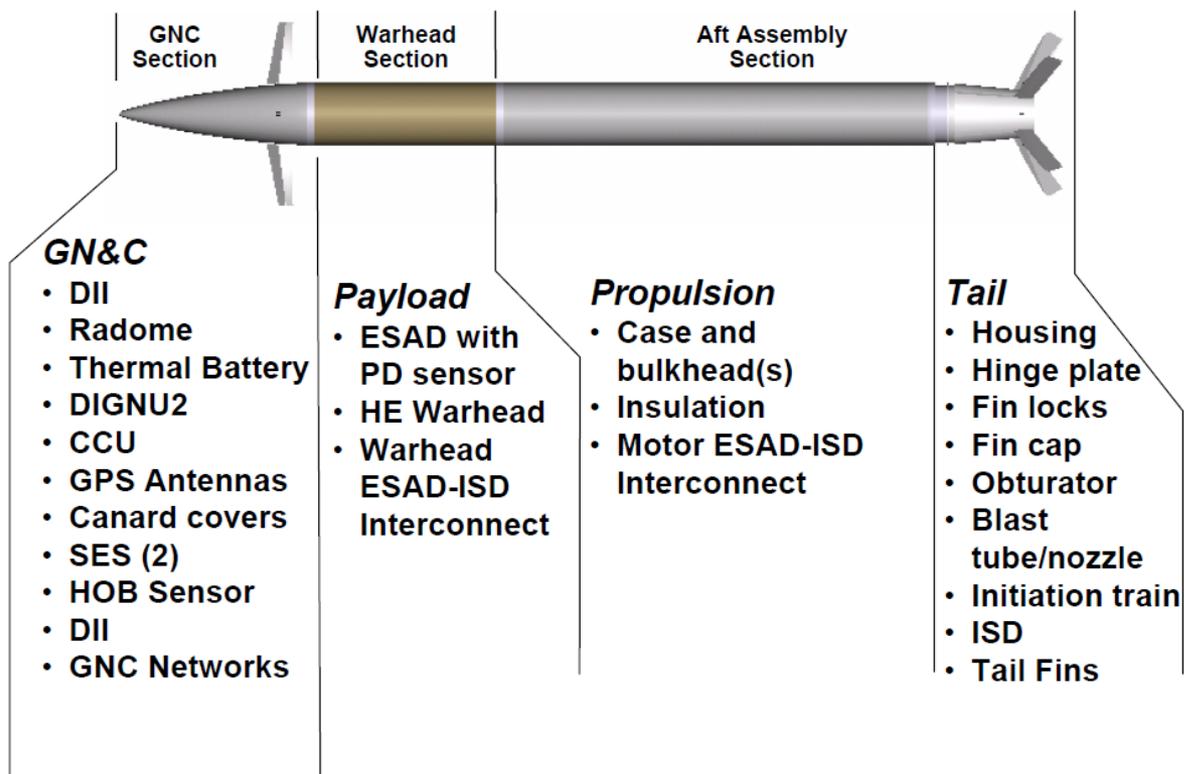

Hull
Wave-piercing tumblehome

Integrated Power System

- (2) Main Turbine Generators (MTG)
- (2) Auxiliary Turbine Generators (ATG)
- (2) 34.6 MW Advanced Induction Motors
- Integrated Fight Through Power

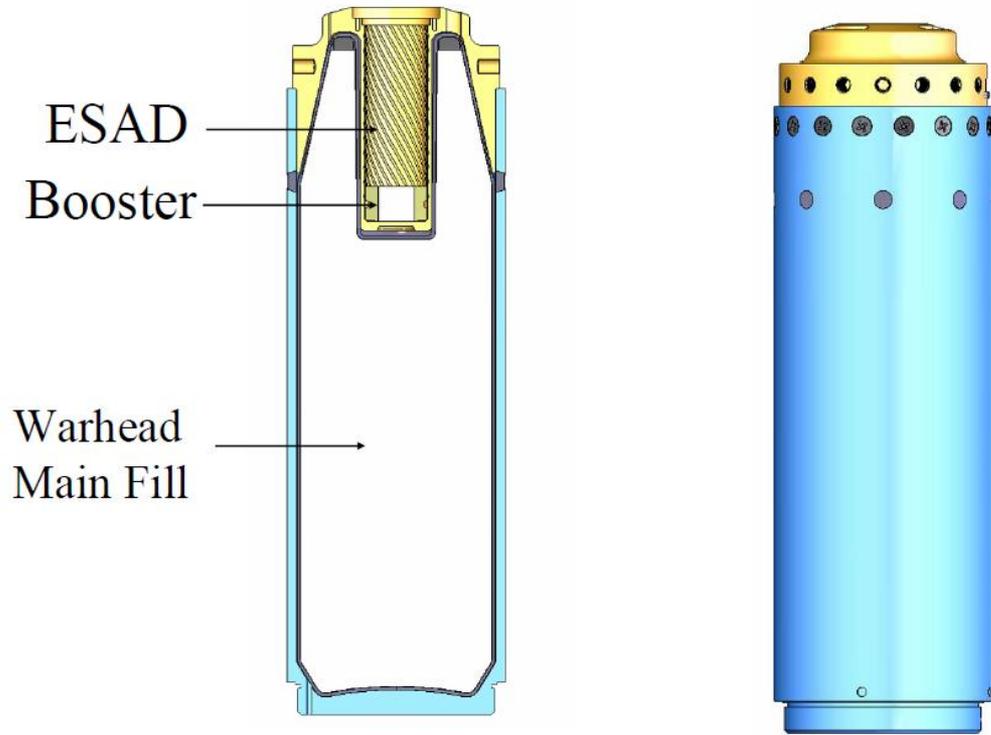

155mm Long Range Land Attack Projectile

LRLAP System Overview

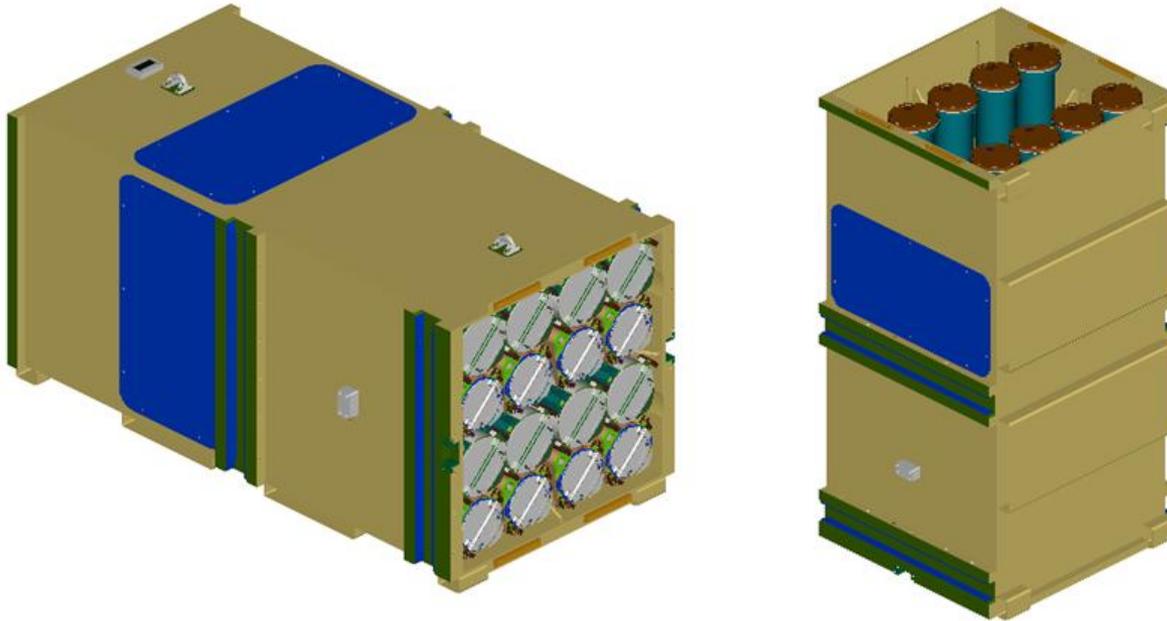

Unitary Charge Warhead

Warhead Section

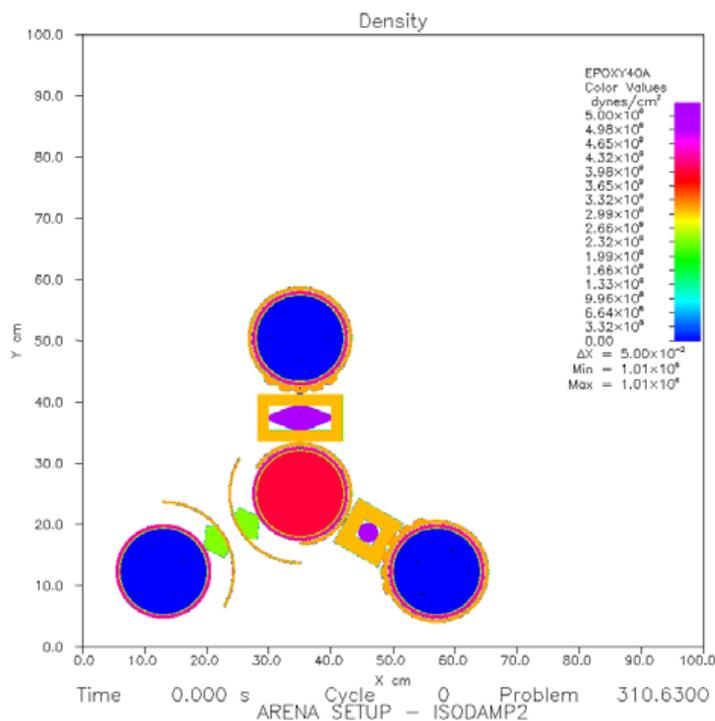

Munitions Container

- **Designed for automated handling in ship magazine**
- **8 LRLAP projectiles**
- **8 propelling charge**
- **2700 kg fully loaded container gross wt.**

Initial Trade Study and Inert Acceptor Test

Hydrocode Simulation

**C4 Filled Donor and
3 Instrumented Inert Acceptors**

Anti-Fratricide System Development

Initial Munitions Container Anti-Fratricide Liner

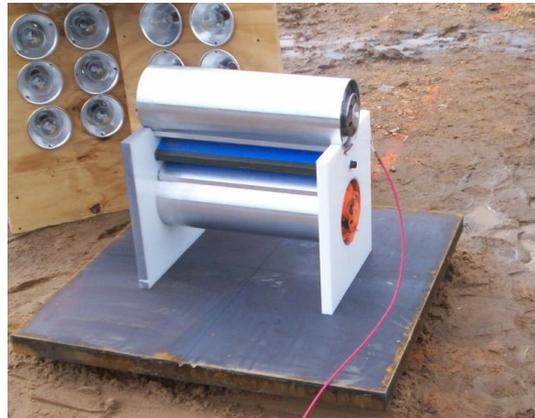

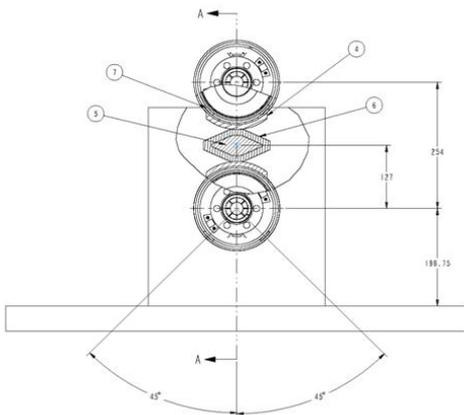

Engineering SD Demonstration of Initial Concept

Engineering test scored as failure, acceptor WH detonated

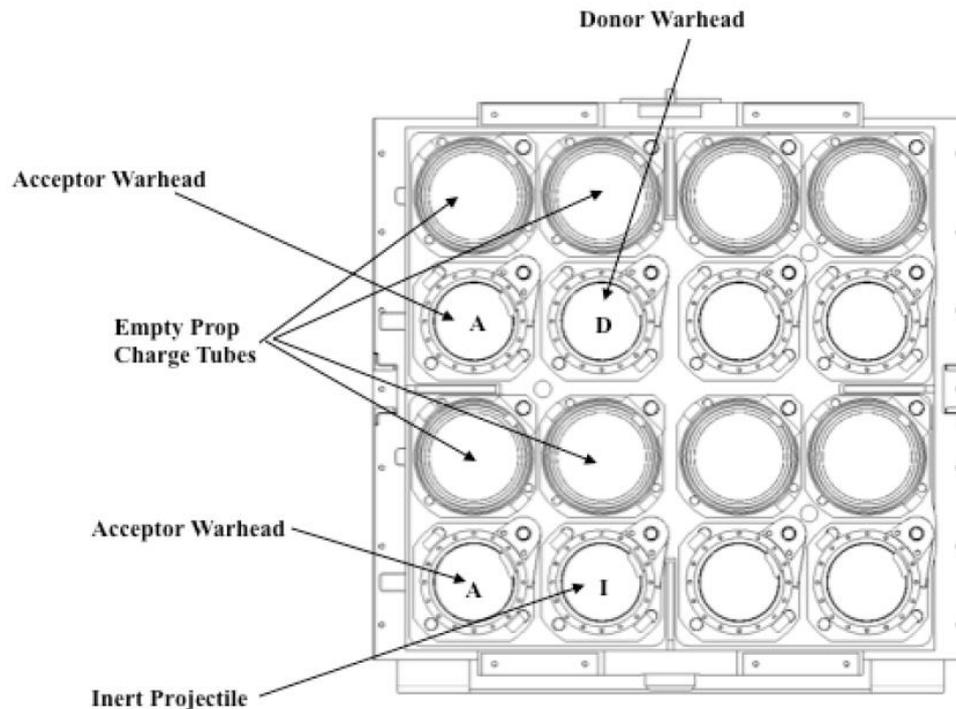

Alternate Concept

- Failure Review Board (FRB) was formed
- Multiple failure paths evaluated and examined
 - CTH hydrocode analysis at NAWC, China Lake, CA
 - HULL hydrocode analysis at GD-OTS, Niceville, FL
- Modified diamond bar from initial trade study showed greatest potential
- Repeat engineering test at NTS, Camden, AR Oct 2007
 - **Success!**

IM and Hazard Class SD Test

- Tactical donor and two acceptor warheads in container
- Mass equivalent steel GNC and RM sections used for confinement
- Conducted SD-1 test at NTS, Camden, AR June, 2012

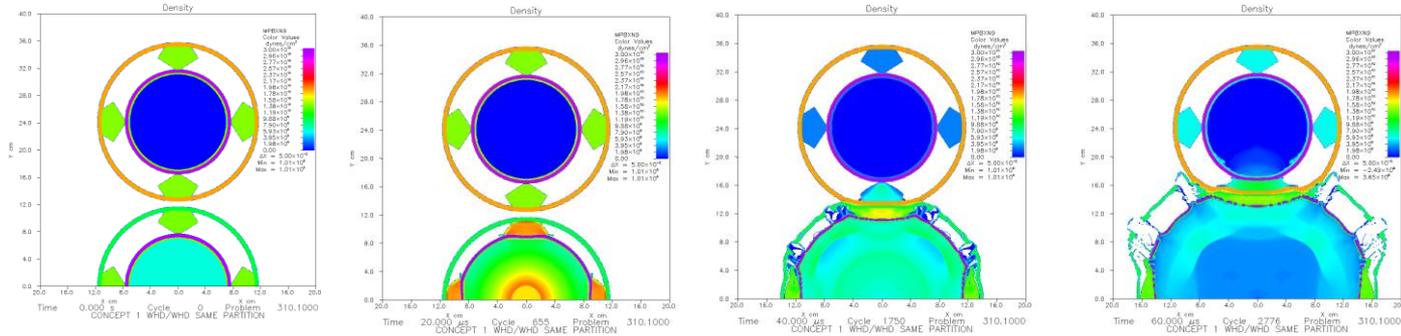

SD-1 Results

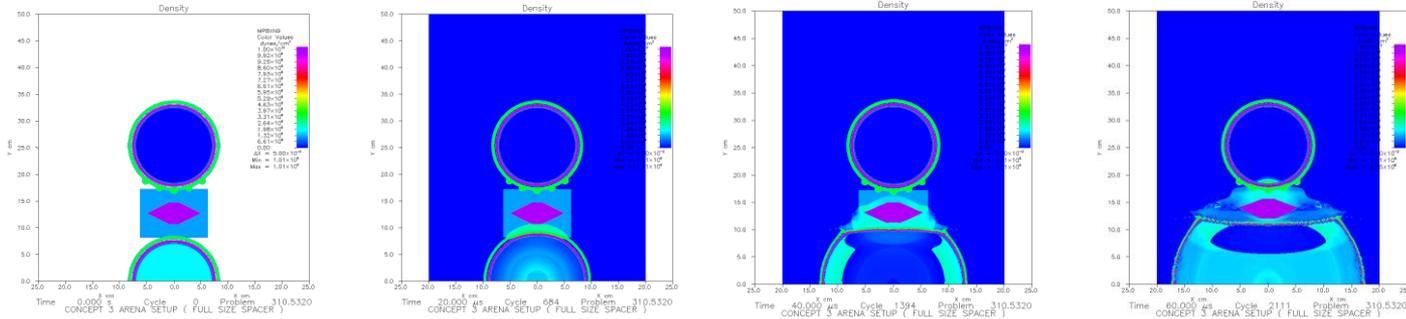

- **Above: Aft Container, post test**
- **Upper Right: Forward view, post test**
- **Right: Acceptor WH case**

Hydrocode Modeling

Initial Concept at 20 μ-second Intervals

Simulation of Diamond Bar at 20 μ-second Intervals

Conclusions

- **Munitions container well positioned to pass SD test with Warhead, Rocket motor, and Propelling Charge**
 - Munitions Reactions Evaluation Board (MREB) scored SD-1 as a PASS in October 2012
- **IPT FRB collaborative effort with U.S. Navy and contractors was a success**
- **Special thanks to:**
